ABOUT ME

Aspiring Data Scientist with a strong passion for transforming data into actionable insights. Proficient in Python, Excel, and data visualization, with hands-on experience in academic and self-initiated projects. Skilled at uncovering patterns, solving real-world problems, and making data-driven decisions. Highly motivated to learn continuously, collaborate effectively, and contribute to impactful analytics solutions.

EDUCATION

- 2023-2027 B.Tech Artificial Intelligence and Data Science
CGPA : 8.86
- 2022-2023 Class XII with 95% Ponjesly Public Matric Higher Secondary School

TECHNICAL SKILLS

Programming Languages : Python, SQL.

Data Analysis : Numpy, Pandas, Scikit-learn, Matplotlib, Seaborn.

Machine Learning : Model development & evaluation, supervised & unsupervised learning, recommendation systems, feature engineering, cross-validation, hyperparameter tuning.

Deep Learning : Neural Networks (ANN, CNN), TensorFlow, Keras.

Tools & Technologies : Excel, PowerBI, Apache Kafka, Git, GitHub, MySQL.

WORK EXPERIENCE

Data Science Intern – AK Infopark Pvt. Ltd.: Built the Aivora hybrid recommendation system using SVD++, TF-IDF, AI strategies, and Flask with full data preprocessing and model evaluation.

PROJECTS

1. Product Recommendation System

- Developed a hybrid recommendation engine using SVD++ and TF-IDF, enhanced with AI strategies like RFM analysis, trending products, location-based, and price-sensitivity recommendations.
- Built a full Flask web app with user login, product catalog, personalized suggestions, and feedback management.
- Tech: Python, Scikit-learn, Pandas, Flask, HTML/CSS, SQL

2. Smart Agriculture System

- Built an intelligent irrigation prediction system using IoT sensor data (temperature, humidity, soil moisture, motion) and ML models including Decision Tree and Logistic Regression, achieving 98% accuracy.
- Enabled optimized water usage and improved farming decisions by identifying soil moisture as the key factor.
- Tech: Python, Scikit-learn, Pandas, Matplotlib, Seaborn, NodeMCU

3. AI Disease Prediction

- Created a Flask-based application to predict diseases based on user-selected symptoms using a Decision Tree Classifier trained on 100+ diseases.
- Designed a user-friendly interface with dynamic symptom selection and accurate prediction results.
- Tech: Python, Flask, Pandas, Scikit-learn, HTML/CSS

LANGUAGES

Tamil, English
